

Oven & Cooktop Cleaner Product Information

EnviroWizard Oven & Cooktop Cleaner is a non-caustic Industrial strength Oven & Cooktop Cleaner.

- Contains a proprietary surfactant based formula designed to break down fats, greases and oil.
- Naturally lifts grease from all surfaces
- Bio-based and naturally derived product.
- No Harsh fumes.
- Can be discharged down the drain.
- Alkaline solutions, but with a low VOC and high boiling point makes it safer than most products in the market.

What's innovative about the Oven & Cooktop Cleaner?

- A more sustainable Oven & Cooktop Cleaner.
- The product is readily biodegradable.
- It is a moderately alkaline solution that has been designed to remove fats and greases
- Improved performance. The synergistic effect of combining surfactant technology with non-petroleum based solvents will remove fats, oils and greases.
- Energy-efficient product. The surfactants work well even at low temperatures, allowing wash temperature reductions and thereby energy savings.
- Surfactant technology that is naturally derived and renewable

OVEN & COOKTOP CLEANER

Spray and wipe cleaner that removes FOG's after a dwell time.

Ovens, range hoods, BBQ's, floors, outdoor. Can be used on floors to remove heavy soiled fats and grease

The surfactant blend in our Oven & Cooktop Cleaner breaks down stains of fats, oils and greases without giving off harsh fumes. The fats and greases that build up simply lift off the surface once the surfactants have penetrated the soil. The longer the dwell time the easier it is to clean.

Complete Ingredients: Water, Enviro Wizard surfactant blend and fragrance.

Material Data Sheet: Available on web site. www.enzymewizard.com.au

EnviroWizard - The Safer Choice

Oven & Cooktop Cleaner

How to Use:

1. The product comes ready to use
2. For light soiling of fats, oils and greases, spray the surface leave on for 5 minutes and then wipe down.
3. For medium soiling, spray the surface down and leave on for 20-30 minutes and then wipe down
4. For heavy soiling, spray the surface down and leave on for 30-60 minutes. Scrub the surface with a non-scratch pad to remove heavy fatty deposits. Once softened then wipe the surface down.
5. In cases of heavy soiled old grease and fats, the solution needs to be left on for a longer period of time.

Figure 2

Analytical Results Report

From the two diagrams above Figure 1 is the surface with the baked on oil and grease. Figure 2 shows that the solution has penetrated the baked on soil.

The results: The baked on oil drop test has showed that the solution was able to penetrate the baked on oil. Various dwells times were used.

Important Information:

- Ensure that when using the EnviroWizard Oven & Cooktop Cleaner that you don't use the fine mist option.
- The efficacy of the product depends on the dwell time. The older the stain, the longer the dwell time needed. For very old stains a dwell time of at least one hour would be required.
- The use of a non-scratch pad is essential when cleaning old carbonized fats. In some cases, carbonized fats won't be removed.
- Even though the pH is high, because the VOC is low it is a safe product to use.
- Do not mix EnviroWizard Oven & Cooktop Cleaner with other chemicals.
- Not compatible with bleach
- Following surfaces could be sensitive to the oven cleaner:
 - a. Porous material
 - B. Rubber
 - C. Latex
 - D. Coated surfaces.

When in doubt test for compatibility.

- Product may become hazy. Product efficacy will not be affected.
